ELITE WEALTH MANAGEMENT

Dynamic Option Strategy

Please see the Important Disclosures page for additional Elite Wealth Management Strategy information.

ELITE WEALTH MANAGEMENT

The Dynamic Option Strategy embodies the idea of selling put indices and equity options against cash and collecting premium that seeks continuous income stream for the portfolio. The strategy is designed to take advantage of variances in volatility across the entire spectrum of market conditions in order to target generating a continuous income stream. The strategy involves selling out-of-the-money (OTM) puts collecting premiums as long as the price of the underlying security remains above the put strike price at expiration. Stocks may be assigned at a price lower than current market prices at the point of options placement. The put options are used as a tool to generate yield and potentially to acquire a stock at a lower price, which is the strike price of the option. Covered calls are used as a tool to exit assigned stocks and generate income in the interim. This strategy is designed for a long-term investor looking to potentially generate income from the collection of premium and/or to go long equity positions at a lower price to their current trading prices. The strategy can only be implemented for taxable accounts; IRA accounts cannot utilize this strategy given the nature of put selling.

Dynamic Option Strategy

- Seeks to generate monthly income through option premium.
- Has high liquidity and stays mostly cash.
- Capable of generating yield in a bull market, stagnant market and within a range of heightened volatility.
- Strategy may use options to acquire and liquidate specific equity positions.
- Can better target the preferred acquisition and sale price of a stock.
- Can be applied as an options overlay over a long portfolio to enhance performance.
- Options get priced based on volatility. More volatility allows for potentially increased returns.
- We are always the options seller, never the options buyer unless we are hedging the portfolio.
- The strategy focuses primarily on S&P 500 index options with low exposure to single equity options. S&P 500 index options allow for weekly options and premiums, and thus may potentially experience a compounding effect of weekly premiums.
- Risk may be mitigated with a broad, diversified index. Individual stocks can have drastic price movements but a basket of securities like the S&P 500 index would generally experience less fluctuation in volatile markets.

Portfolio Construction

- All initial positions are initiated by issuing puts with attractive strikes on the underlying security.

- Majority of puts expire within 1 to 2 months.

- The % distance Out of The Money (OTM) of put positions when opened is contingent upon volatility and overall market conditions. This calculation is based off a proprietary assessment that takes into consideration a wide array of factors such as institutional placement, organic floors and ceilings based on open interest, previous short-to-long term trading levels, historical extreme price movements around macro events, etc.

- In periods of lower volatility, the %OTM averages around 10% - 20%*. In periods of higher volatility, like what the markets experienced in 2008 and early 2009, the %OTM can be as much as 40%*.

- All puts, regardless of distance from strike, typically have above an 80%* likelihood of expiring OTM with the majority above 95%*, based on the standard deviation of the underlying security.

*Proprietary statistical analysis performed by the investment team.

Portfolio Construction

- If an option expires In The Money (ITM), portfolios may accept assignment and write covered calls against it to lower the buying average until the position recovers to or above the acquisition price, upon which liquidation will occur.

- We find avoiding assignment to be generally more efficient for the strategy, so the standard hedging procedure is to roll or hedge options that may get tested.

  - An example of a calendar roll of a short put position involves buying back the contract and rolling the exposure to a lower strike price at a further expiration. We attempt to do option rolls at a breakeven or credit basis, further increasing the cash buffers in the portfolio.

- In the event of a severe flash crash or an unpredictable severe binary global event, we will reduce exposure accordingly in an effort to not exceed 200% margin for security assignments.

Sample Strategy Deployment Scenario

ELITE WEALTH MANAGEMENT

S&P 500 Price		Strike Price
2,700	Week 1: 13.2% OTM →	2,300
2,600	Week 2: 14.4% OTM →	2,220
2,750	Week 3: 13.9% OTM →	2,300
2,650	Week 4: 14.3% OTM →	2,250
2,550	Week 5: 14.2% OTM →	2,150
2,500	Week 6: 13.8% OTM →	2,100
2,400	Week 7: 14.0% OTM →	2,050
Hypothetical Drastic Market Drop → 2,225	Week 8: 15.2% OTM →	1,900

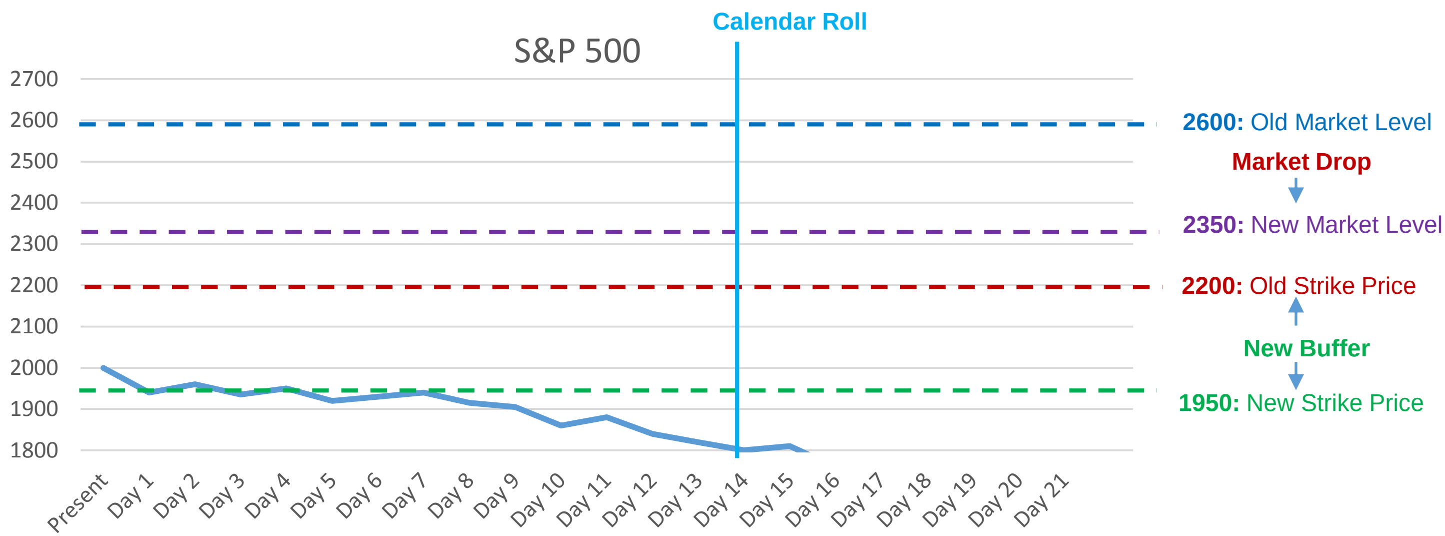
- Capital takes roughly 8 weeks to get fully deployed.
- A staggered exposure approach may provide enhanced provides enhanced risk management and attractive opportunities to capture gains if the market trends favorably.
- Strategy targets dynamic strike prices as market goes up or down each week.
- Strategy starts to generate weekly income/premiums immediately and may fully realize the profit on the premiums after roughly 8 weeks when the option contracts start to expire.

The above is a hypothetical example developed by Elite Wealth Management for illustrative purposes only and there is no guarantee that this scenario will develop or that the strategy will be profitable.

Risk Management Example (Calendar Roll)

ELITE WEALTH MANAGEMENT

$2,600
Current Market Price → **15.4%** (approximate out-of-the-money range) → **$2,200** Selected Strike Price



$2,350 New Market Level → **$2,200** Previous Strike Level → **11.4%** Calendar Roll → **$1,950** New Strike Selection

- Consider a hypothetical high volatility scenario where the S&P 500 drops 10% in the span of two weeks.
- We would buy back the original strike price of 2,200 and move it to the 1,950 strike at a breakeven or credit further out in time. This is called a calendar roll.
- The calendar roll to a further date creates a new buffer to stay ahead of the market drop.
- The market would then need to drop to the 1,950-2,000 range to test the new strike price.

The above is a hypothetical example developed by Elite Wealth Management for illustrative purposes only and there is no guarantee that this scenario will develop or that the strategy will be profitable.

Largest S&P 500 Open Gaps

ELITE WEALTH MANAGEMENT

Below are the top 10 largest down gaps in history for the S&P 500 at the market open. We deploy our positions on average 2 to 2.5 times further then the largest historical opening gap in order to better mitigate against market shock events. The historical gaps are not significant enough to trigger a margin call and liquidate our positions with our risk management, margin parameters and buffers that we utilize.

Top 10 Largest S&P 500 Open Gaps	
9/26/1955	-6.62%
6/26/1950	-5.38%
6/29/1950	-3.70%
4/18/1961	-3.61%
12/4/1950	-3.36%
2/9/1953	-3.09%
11/28/1950	-3.07%
10/21/1957	-2.93%
10/10/1955	-2.90%
10/3/1955	-2.70%

Quantitative/Technical

Factors Assessed to Determine Probable Stock or Index Price Range:

- Common graphical indicators, e.g. support and resistance levels, moving averages, breakouts, etc. We also look at how the stock or index has moved relative to the overall market during systemic upturns/downturns.
- Is the stock or index currently on an upward or downward trend?
- Put options with >80%* probability of expiring Out of The Money (OTM) based on the last 52-week trading range. Majority of positions land >95%* probability of expiring OTM.
- Changes in insider and institutional company holdings.

*Proprietary statistical analysis performed by the investment team.

Quantitative/Fundamentals

Factors Effecting Position Exposure Levels

- Companies with positive P/E ratios over the last four quarters.
- Focus on companies with increasing revenue/decreasing debt.
- Positive long-term outlook. Company's products/services have long-term value.
- Strong balance sheet.
- We look at the range of news reports and releases over the last 3-6 months while assessing upcoming events, e.g. earning reports, litigations, FDA announcements, corporate events, etc.

The performance for the period September 2011 through January 2014 was achieved while Mr. Lennil was the Chief Investment Officer ("CIO") with his prior firm, Exagroup, Inc. ("Exagroup") . While Mr. Lennil, was not affiliated with Elite Wealth Management during that time period, the accounts that comprise the performance of DOS were managed on behalf of clients of Elite Wealth Management as he was the sole portfolio manager for all client accounts managed while employed at Exagroup. There was a 15% performance fee up until November 2014 that is now eliminated.

Dynamic Option Strategy ("DOS") Risk Disclosure Statement: All investments include a risk of loss that clients should be prepared to bear. The principal risks of the Elite Wealth Management strategies are disclosed in the publicly available Form ADV Part 2A. Options carry a high level of risk and are not suitable for all investors. Certain requirements must be met to trade options in your account. If you are interested in margin lending (a loan to purchase securities that is secured or collateralized by securities in your account) or option trading, please visit http://www.optionsclearing.com/about/publications/character-risks.jsp to read the Options Disclosure Document titled "Characteristics and Risks of Standardized Options", or call the Interactive Brokers, LLC ("IB") office @ 1-877-442-2757 for a current copy, before considering any option transaction.
